

BCCS-US / AIEOS MVP

CTO Demonstration Requirements v1.0

Purpose

Define the exact demonstration capabilities required for the BCCS-US MVP powered by AIEOS. The objective is to produce an investor-ready and BMA-ready demonstration proving runtime-governed intelligence rather than simple AI-assisted automation.

Primary Demonstration Objective

Every demonstration should answer one question:

"Can the system determine whether an action is admissible before it executes?"

Demo 1 – AI Compliance Assistant

- Ask a regulatory question.
- Return correct FAA references.
- Show reasoning and evidence.

Demonstrates: Regulatory ingestion, semantic search, AI reasoning, evidence retrieval.

Demo 2 – Continuous Compliance Dashboard

- Display compliance health.
- Display evidence gaps.
- Display audit readiness.
- Display governance status.

Demonstrates: Real-time enterprise awareness.

Demo 3 – Evidence-on-Demand

- Select a regulation.
- Assemble supporting evidence.
- Generate an audit-ready package.

Demonstrates: Audit preparation in minutes.

Demo 4 – Runtime Refusal

- Attempt an inadmissible action.

- System refuses execution.
- Display policy, authority and regulatory basis.

Demonstrates: GATE runtime refusal.

Demo 5 – Human Escalation

- Decision exceeds delegated authority.
- Request human approval.
- Log approval then execute.

Demonstrates: Human sovereignty.

Demo 6 – Protected State

- Attempt unauthorized modification of evidence or audit history.
- Block and log the attempt.

Demonstrates: Protected-state governance.

Demo 7 – Regulation Update

- Detect new FAA requirement.
- Identify affected procedures, personnel and documents.

Demonstrates: Continuous regulatory awareness.

Demo 8 – Shared Enterprise Awareness

- One agent discovers a change.
- Other agents update automatically.
- Dashboard reflects the change.

Demonstrates: Shared enterprise awareness.

Demo 9 – Enterprise Memory

- Recall prior governance decisions.
- Explain how they influence current recommendations.

Demonstrates: Continuous learning.

Demo 10 – Governance Dashboard

- Display enterprise health.
- Governance health.
- Pending approvals.
- Refusals.

- Escalations.
- Compliance readiness.

Demonstrates: APEX enterprise visibility.

Demo 11 – Complete Audit

- Generate a complete audit package.

Demonstrates: Commercial value of Evidence-on-Demand.

Demo 12 – Complete Operational Story

- Question → Compliance Check → Evidence → Governance → Approval → Execution → Audit Record → Dashboard Update.

Demonstrates: End-to-end governed intelligence.

MVP Success Criteria

- Understands and searches FAA regulations.
- Maintains continuous compliance awareness.
- Refuses inadmissible actions before execution.
- Escalates when authority is insufficient.
- Preserves human authority.
- Produces Evidence-on-Demand.
- Coordinates multiple AI agents.
- Provides enterprise governance visibility.
- Supports BMA and investor demonstrations.
- Clearly demonstrates runtime governance as the differentiator.

Three Audiences

- **BMA:** Can this reduce our compliance burden and improve operations?
- **Investors:** Is this a defensible enterprise platform?
- **Patent Counsel:** Which capabilities demonstrate novel, protectable intellectual property?
